Project Report

DIGITAL LITERACY

Course code-CSE1001

Winter Semester:2025-2026

Name of the student : Aryan Rai

Register Number:25BAI10726

1. Introduction

Digital literacy is an essential skill in today's technology-driven world. As students, we use digital platforms daily for communication, learning, and collaboration. This project was assigned with the objective of understanding various aspects of digital literacy, including online presence, communication, coding platforms, and cyber safety.

As a Student Digital Ambassador, my role was to explore and demonstrate how digital tools can be used effectively and responsibly. Through this project, I learned how to create professional profiles, design informative content, use online platforms, and understand online threats.

This project helped me gain practical knowledge and improved my confidence in using digital tools, which will be beneficial throughout my academic journey and future career.

2. Task 1 – Digital Literacy Infographic

For this task, I used Canva to create a digital literacy infographic. The infographic highlights the meaning of digital literacy, safe internet practices, and the importance of maintaining a professional online presence. I designed it in a simple and visually appealing way so that students can easily understand the key concepts.

The infographic includes important points such as using strong passwords, being aware of online threats, and using digital tools effectively for academic purposes. I also added icons and short descriptions to make the design engaging and informative.

One interesting aspect of this task was learning how to present information visually instead of writing long paragraphs. It helped me understand the importance of visual communication. The challenging

part was selecting the right layout and organizing content within limited space. Overall, this task enhanced my creativity and helped me understand how digital tools like Canva can be used for effective communication.

3. Task2~ Student digital portfolio

In this task, I created and updated my profiles on GitHub and LinkedIn. GitHub is a platform used for storing and managing coding projects, while LinkedIn is a professional networking platform that helps individuals connect with professionals and explore career opportunities.

On GitHub, I created a profile README that includes my name, branch, and learning goals. This will help me showcase my projects in the future. On LinkedIn, I added my educational details, including my degree, institution, and expected graduation year.

These platforms are important for building a strong digital presence. Over the next four years, I plan to use GitHub to upload my projects and improve my coding skills. I will use LinkedIn to build a professional network, connect with industry experts, and explore internship opportunities.

This task helped me understand the importance of maintaining a professional online identity and how it can benefit my academic and career growth.

4. Task 3 – Coding & Collaboration Platforms

In this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level coding problem. This helped me understand basic problem-solving and how coding platforms work. It was a good starting point for improving my programming skills.

I also created a Google Form as a Digital Literacy Awareness Quiz. The form included five questions, such as multiple-choice and short-answer questions, to test basic knowledge of digital literacy. I also viewed responses through the linked Google Sheet.

These tools are very useful for students. Coding platforms like HackerRank help improve logical thinking and programming skills, while Google Forms can be used to create quizzes, surveys, and collect data efficiently.

This task gave me practical experience in using digital tools for both learning and collaboration, which will be helpful in my academic journey.

5. Task 4 – Email Etiquette & Communication

Effective communication is an important part of digital literacy. In this task, I learned how to write professional emails and follow proper email etiquette. Writing emails with a clear subject line, polite tone, and proper structure is essential for professional communication.

Poor digital communication can lead to misunderstandings and create a negative impression. For example, sending an informal or unclear email to a professor may result in confusion or lack of response. Using proper greetings, clear content, and respectful language can avoid such issues.

This task helped me understand how to communicate effectively in academic and professional environments and the importance of maintaining a formal tone in emails.

6. Task 5 – Cybercrime Awareness

UPI fraud is a common type of cybercrime in which attackers trick users into sharing sensitive financial information or authorizing fraudulent transactions. It usually occurs through fake calls, messages, or links that appear to be from banks or trusted sources. In many cases, users are asked to enter their UPI PIN or approve a payment request, which results in money being deducted from their account.

While researching this topic, I was surprised to learn how easily people fall victim to such scams due to lack of awareness. Even a small mistake can lead to financial loss. This task helped me understand the importance of being cautious while making online transactions. As a result, I will avoid clicking unknown links and never share my PIN or OTP with anyone.

7. Conclusion

This project provided me with valuable knowledge about digital literacy and its importance in everyday life. I learned how to use various digital tools, create professional profiles, communicate effectively, and stay safe online.

Each task helped me develop practical skills that will be useful in my academic journey and future career. The project also increased my confidence in using online platforms responsibly.

Overall, this experience helped me understand the role of digital literacy in personal and professional growth and prepared me to use digital technologies more effectively.
